

Brian Teeters

Software Engineer, Frontend Focus

Carmel, IN | brianteeters.dev@gmail.com | bateeters.github.io/portfolio | github.com/bateeters

SUMMARY

Frontend-focused developer with a design background that actually shows up in the code. Two years contributing to a full .NET, C#, Razor, and JavaScript product suite, with the bulk of that work inside a CMS platform that runs 780+ live client sites. Migrated 300+ of those sites off legacy infrastructure, shipped 10+ page templates, 4+ themes, and a search component tied directly to a proprietary API for both first and third-party use. Know how software should look and how it should work.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C#

Frontend: React, Redux Toolkit, React Hooks, HTML5, CSS3, Bootstrap 5, Responsive Design, Axios, Vite

Backend: Node.js, Express, MongoDB, Mongoose, REST APIs, JWT Authentication

Tools: Git, Docker, CI/CD, npm, Jira, Agile / Scrum, Webpack

Enterprise: Razor, .NET, MySQL, Salesforce, Adobe XD

Familiar With: Context API, WCAG Accessibility Standards

EXPERIENCE

Software Developer I

Remote

VacationPort

July 2024 - Present

- Moved 300+ CMS client sites from legacy to current version, allowed for legacy retirement and brought all 780+ active sites onto a single supported codebase.
- Wrote a configurable search component now available on all 780+ sites, plus a standalone version bringing a proprietary API search behavior to third-party platforms.
- 10+ CMS templates and 4 themes built from scratch, cut new-site setup time and gave account teams more modern options during client onboarding.
- Daily work across C#, Razor, JavaScript, HTML, and CSS in a 6-8 person Agile team, with full sprint cycles, QA sign-off, and production releases.

Senior Graphic Designer

Carmel, IN

EZAdsPro

December 2017 - March 2023

- Handled design for 100+ client accounts across digital and print, from initial brief through final delivery.
- Converted marketing goals and brand guidelines into structured, user-focused layouts. This same thinking now goes into front-end work.
- Pushed internal production toward digital-first workflows, cutting out repetitive manual steps and improving consistency across deliverables.

PROJECTS

Food Chain Rumble (Full-Stack MERN)

foodchainrumble.onrender.com

Live

- Character roster, global leaderboards, a community forum with voting, and a protected player dashboard.
- React with Redux Toolkit and React Router on the frontend, Express API backed by MongoDB/Mongoose with schemas for users, match history, leaderboard entries, characters, and forum posts for scaling.
- Running on Render via CI/CD, Docker Compose handles local dev across a client/server monorepo. 170+ commits to date.
